## Fuse - switch disconnector VLD01

Fuse-switch disconnector is a protection device with an exchangeable for D01 fuse link. This system enables the following protecting advantages, concerning the D0 fuse:

- Replacement of the fuse-link can be done with a movable holder, without danger of direct contact to the parts under voltage.
- The device can be switched on without screwing, contact pressure is applied automatically by a spring.
- Complete protection against touch by VBG 4.
- In position 1 and 0 , the fuse-link operation indicator is visible through a transparent window.

## Switch - disconnector - fuse STVD02

Switch-disconnector-fuse is a device which combines the functions of the switch and of the fuse D0.
The system enables the following advantages of protection in comparison with the fuse D0:

- The changing of the fuse-link without danger of direct touch of parts under voltage.

Snap-on mounting on rail according to EN 60715.

- The complete protection against touch according to VBG 4.
- The possibility of connecting supply from the upper or from the lower side.

It can be used as a main switch and tariff fuse in a single device.

- Possibility of sealing in ON or OFF positions with or without fuse-link.

STVD02 set includes a switch-disconnector-fuse, gauge pieces of all sizes and adapters of all sizes.
