

Rotary Cam Switches

Rotary cam switches series CS are intended for multiple switching operations in main as well as in auxiliary circuits:

- As motor switches they are designed for direct-online starting and stopping of single- phase and three-phase motors. They also come out as star-delta switches, reversing switches, pole-change over motor switches.
- In auxiliary circuits they are assembled in compliance with the switching programme according to preference:
 - switches for control, signalling and measuring circuits.
 - switches, selector switches and step switches e.g. for transformers and welding apparatuses.
 - Group switches e.g. for switching operations of resistors and heaters.
 - Control switch with automatic return

Advantages

- high making and breaking capacities
- electrical and mechanical endurance
- small dimensions.

Rotary cam switches comply with international and national standards such as: IEC/EN 60947-3, VDE 0660, TS EN 60947-3, BS 5419 etc.

Designation

CS XX(I_{th}[A]) YY(diagram) Z_(design)

- Emergency switch makes an electrical separation between electrical supply and electrical equipment
- Control handle is red according to standards, and the plate behind is yellow
- Emergency switch can be locked in open position "0" with up to three padlocks.

Rotary cam switches in insulated enclosures with IP65 degree of protection.
Colour of enclosures is grey (RAL 7035).

Technical data

Type		CS 10	CS 16	CS 25	CS 32	CS 40	CS 63	CS 80	CS 100
