

Glow starters for fluorescent lamps

The glow starter is a component for ignition of fluorescent lamps. Appropriately selected starter assures the proper function and longer life-cycle of fluorescent lamp. The starter type ZTA can be used with fluorescent lamps of power range from 4 to 22W, supplied by voltage ~110-130V and in lamps supplied by voltage ~220-240V, when fluorescent lamps are serially connected (see the connection diagram). The starter type ZTE can be used with fluorescent lamps of power range from 4 to 80 W, Supplied by voltage ~220-240V.

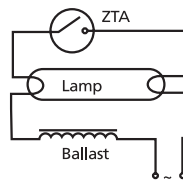

Glow starters for fluorescent lamps ZTA and ZTE

type	Comply with
ZTA/3	
ZTE/2	EN 60155,
ZTE/5	IEC 60155+A1:1995
ZTE/7
