

## 1. INTRODUCTION

The 9 VDC - 1.6 A power supply unit is used to power up to 2 active products: switch Cat. No. 413010, TV splitters Cat. Nos. 413018/19, automatic Gigabit Triple Play unit Cat. No. 413044 (provide 2 power supply units to power 2 automatic ${ }^{\text {Gigabit }}$ Triple Play units).

## 2. SELECTION CHART

| Description | Cat. Nos. | No. of <br> modules | Weight (g) |
| :--- | :---: | :---: | :---: |

## 5. TECHNICAL FEATURES

### 5.1 Electrical features:

Plastic casing: PC RAL 7035
IP20 - IK04
Tensile resistance on DIN rail: 100 N
Complete universal AC input
Protection against: short circuits/overloads/overvoltages
Air cooling by natural convection
Can be mounted on TS-35/7.5 or 15 DIN rail
Class II insulation
Voltage present LED indicator
Burn-in test at $100 \%$ of total load
It is essential that this power supply unit is only used in the context of one of the following combinations of modular active products, or to power a single active product.

Consumption: example of combinations

| Product combination | DC current <br> consumption at 9 V | Power <br> consumption at <br> 230 VAC | $\operatorname{Cos} \varphi$ |
| :---: | :---: | :---: | :---: |
| 1 switch+1 TV SAT <br> splitter | 0.81 | 9.2 | 0.5 |
| 1 switch+1 TV cable <br> splitter | 0.77 | 8.9 | 0.5 |

Caution: The triple play unit cannot be be powered with another active unit using the same 9 V power supply unit.
